

Network Traffic Analysis Report

I. Analysis Summary

Network Traffic Protocol Summary:

- : 62 packets

Traffic Legitimacy Analysis:

Based on the performed checks (ARP Spoofing, basic SQLi patterns), no specific illegitimate traffic was detected. Traffic appears legitimate from this perspective.

Note on Blocking:

Automatic blocking of attackers is an advanced feature and has not been implemented.

If threats are identified, manual intervention or dedicated security tools are recommended.

II. Protocol Statistics

The table below lists all network protocols detected during the capture and the corresponding number of packets for each.

Protocol	Packet Count
<member 'name' of 'Packet' objects>	62

III. Protocol Distribution Graph

The bar chart below visually represents the distribution of captured packets by protocol.
